

This program creates task descriptive time hacks in ASCII text that can be imported into Excel and do subtractions to show the length of time that each task takes. This is great for a guy like me, whose job requires that I multi-task all day long. The reports that I can produce by showing the time each task took, and aggregating it will be very revealing for our management. This Time Tracker application, as simplistic as it seems, will help me communicate some simple facts about a very complex position.

Example reports from data produced by the previous version of this program:

_		Today	Week to Date		Running Pct		
	AT	5.2	7.7	61.8	45.3		
	CM	1.9	4.5	22.3	26.8		
	DC	1.3	4.7	15.9	28.0		
	Total	8.5	16.9	100.0	100.0
