

# Digital Transformation Topics, Perspectives and Opportunities to Help Cameroon Succeed and Thrive in the Post COVID-19 World

Prepared for  
The CAPDA  
Conference in  
Yaounde & Libreville  
Cameroon,  
Central Africa

William Favre Slater, III  
Chicago, Illinois  
July 23, 2020

# Disclaimer

This presentation will be delivered at the request of the organizers of the CAPDA Conference in Yaounde & Libreville, Cameroon.

The content presentation is from William Favre Slater, III, a private U. S. Citizen, & President of Slater Technologies, Inc., and his research sources. It was prepared and presented with Good Will as a Service to Benefit the Good Citizens of Republic of Cameroon, and not as a representative of the U.S. Government or the Internet Society.

Mr. Slater only represents himself in his dealings with the Citizens of Cameroon and is solely responsible for his comments and content.

## Objectives :

- ✓ Lessons learned and Diagnostics from the pandemic with a view to carrying out an effective audit of the level of digitalization of processes and training.
- ✓ Listen, understand what is going on and question certain doubts.
- ✓ Reevaluate the global digital strategic chain for the benefit of emerging markets with the aim for a better and affordable internet and innovative fluidity.
- ✓ Appreciate and strengthen our resilience in terms of teleworking, distance learning and online management
- ✓ Effectively manage future digital changes, disruptions and transformations.

## **Expected results:**

- ✓ Transformation of teleworking and distance learning into a real performance lever.
- ✓ New social agreement to bounce back from pandemic.
- ✓ Identifications of the various innovations resulting from pandemics.
- ✓ Listing of digital opportunities available in the aftermath of the crisis.
- ✓ Maturation of teleworking and distance learning.

## Sub-themes:

1. « How to reinvent our society at the end of the current crisis »
2. « Post health crisis: Vision, perspective and leadership »
3. « New global perspectives, challenges and development opportunities »
4. « Make distance training and telecommuting a real performance lever »
5. « Regional integration and issue of digital transformation: consultation framework. »
6. « Innovation strategies for better choices for Africa; support of the informal sector and capital market. »
7. « The geopolitical war around Artificial Intelligence.
8. What digital independence for what sovereignty? »
9. « The contribution of Data in data security and digital architecture. »
10. « Digital perspective and transformative leadership: teleworking and speed / agility of decisions Perspective. »
11. “The fourth industrial revolution, its socio-economic impact and the challenges ahead”

# Executive Summary

- 2020 has brought the entire World many unexpected surprises and business challenges.
- For Leaders are strategic and resourceful, Technologies such as the Internet, distributed & decentralized computing, AI, Blockchain & Quantum Computing offer great hope for the future.
- This presentation will present Digital Transformation Topics, Perspectives and Opportunities to Help Cameroon Succeed and Thrive in the Post COVID-19 World.

# Agenda

# Cameroon Today – The COVID-19 Crisis

# Cameroon Today – The COVID-19 Crisis

The screenshot shows the COVID19onl website interface. At the top, there is a navigation bar with links for Home, By Region, Maps, Resources, Death Toll, and Other. Below the navigation bar, there is a live feed of updates from various regions, including Asia, Nepal, and Cameroon. The main section is titled "COVID-19 statistics for Cameroon" and displays six key metrics in a grid format: Total Cases (16157, 0.00% increase), New Cases (0), Total Deaths (373, 2.31%), Total Recovered (13728, 84.97%), Active Cases (0, 0.00%), and Critical Cases (2056, 12.73%). Below the grid, it indicates the last update was 5 seconds ago. The next section is "CoronaVirus charts for Cameroon" with a "Show charts" button. Below that is "Coronavirus statistics for Cameroon" which includes a table of data for Cameroon and a comment section.

# Reinventing Cameroonian Society at the End of the Health Crisis

## What Would It Take to Reskill Entire Industries?

Today, we believe this need is no longer just a recommendation, but a necessary step to economic recovery. The good news is that some investments in reskilling are already in the works. In the last year, many of the world's largest employers have made pledges to help their workforces build new skills. Amazon announced a **\$700 million fund to reskill 100,000 workers**. Orange, the French telecoms giant, announced an investment of **€1.5 billion for a similar initiative**. And PwC, the global professional services firm, tops those with an investment pledge of **\$3 billion**.

# Post Health Crisis: Vision, Perspective & Leadership

## Learning Organization Components

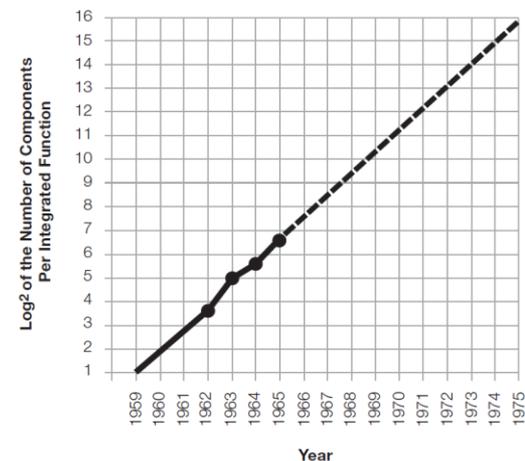

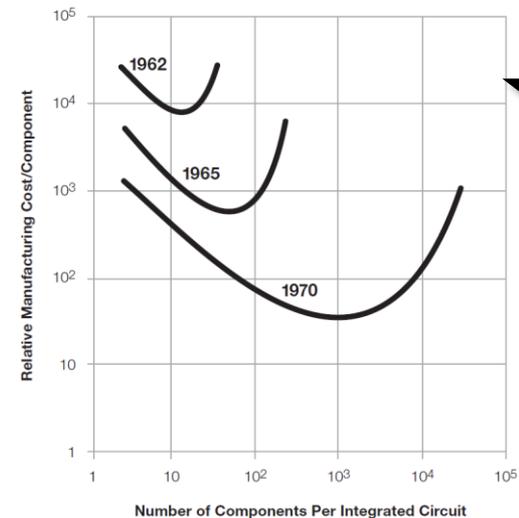

Concept taken from Peter Senge – The Fifth Discipline

# New Global Perspectives, Challenges and Development Opportunities

# New Global Perspectives, Challenges and Development Opportunities

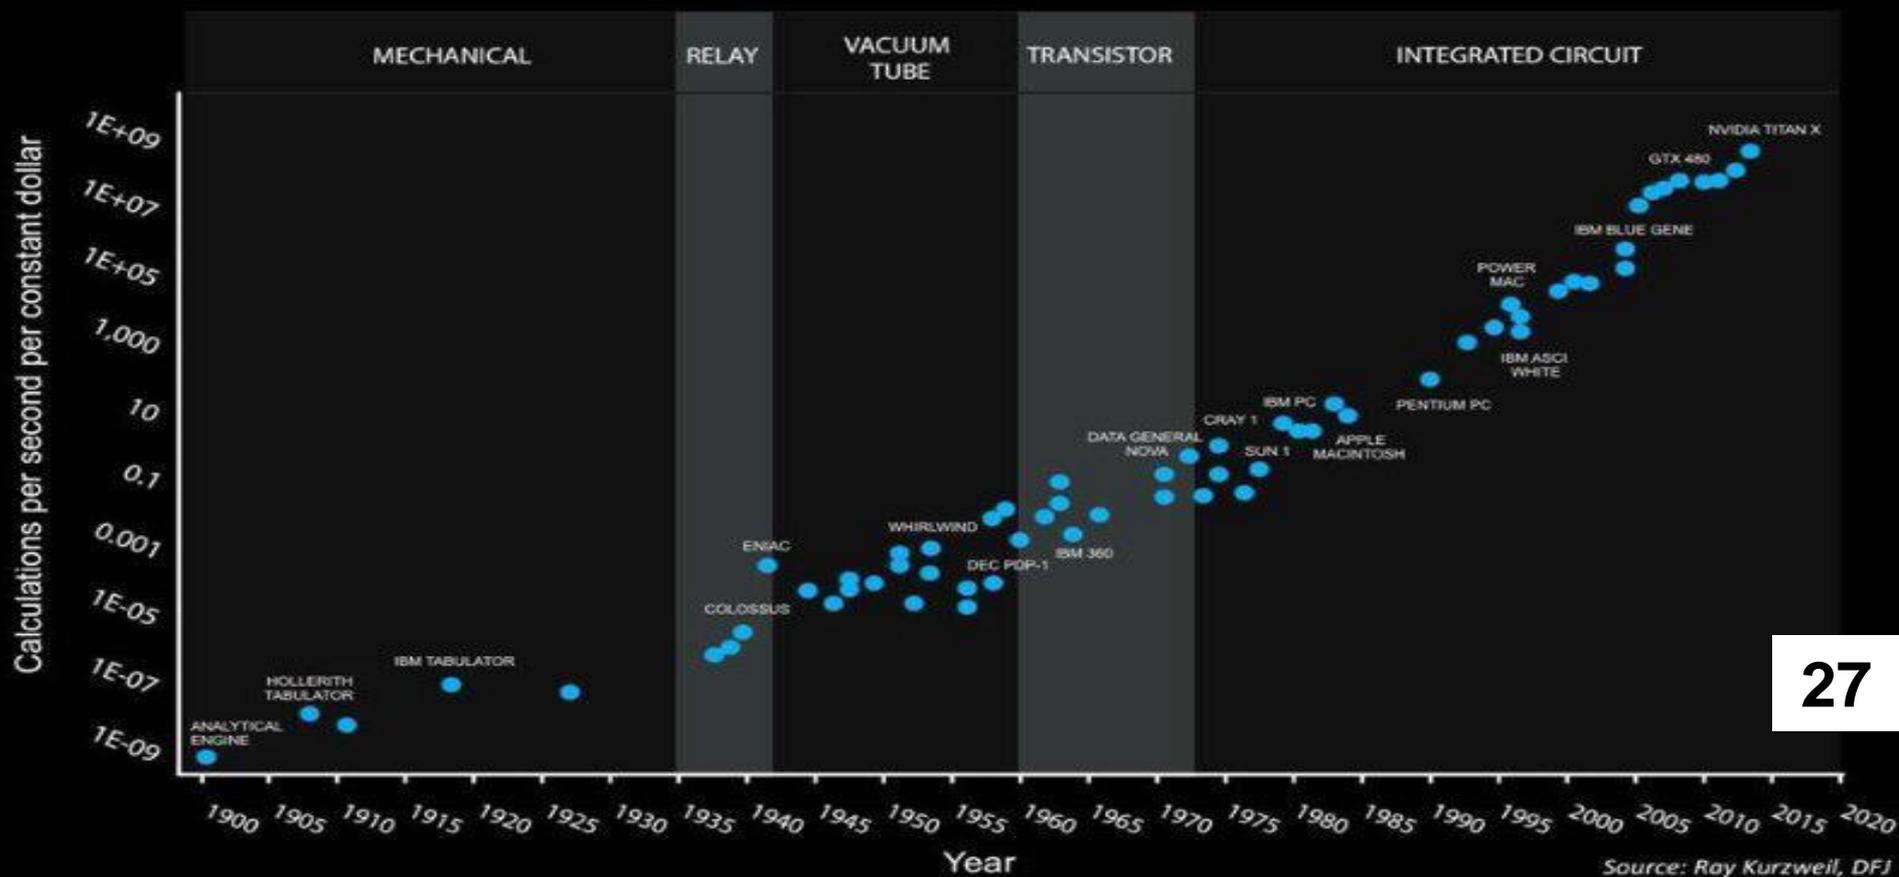

- Ever since **Moore's Law** was introduced in April 1965, technology leaders have realized that electrical parts such as computers and memory and networking devices have a finite useful life and that their value decreases rapidly over time.
- **The challenge for technology leaders and stakeholders** is to make the correct choices and investment decisions with an understanding that the whatever they decide today will be less valuable and obsolete in 4 to 6 years. For example, in the U.S., big tech firms replace the servers in their Data Centers every 48 to 60 months.
- **The challenge is for the users of new technologies:** they must rapidly, continually retool and master the skills to required tp deliver the maximum return on investment to the managers who made the decisions to acquire these technologies. ICT professionals are therefore always having to rapidly learn new skills just to keep up in their profession.

Never fully built, Charles Babbage's invention was designed to solve computational and logical problems

## 3 ... will lead to the Singularity

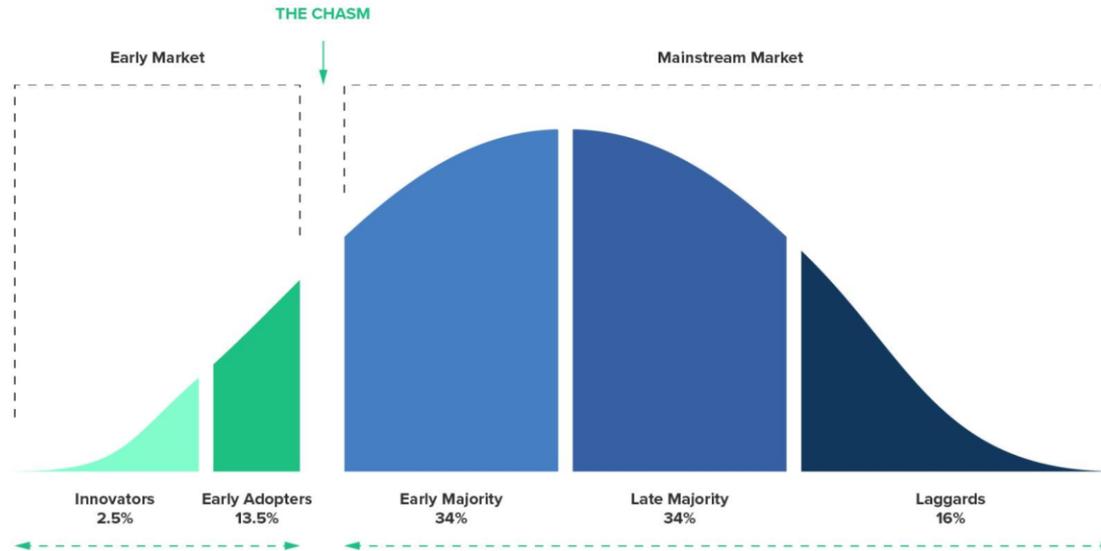

**Apple II**  
At a price of \$1,298, the compact machine was one of the first massively popular personal computers

**Power Mac G4**  
The first mac personal computer to deliver more than 1 billion floating-point operations per second

# New Global Perspectives, Challenges and Development Opportunities

Bell curve graphic of the technology adoption life cycle.

In the technology adoption life cycle, “Innovators” are the smallest group, yet the most successful. They are followed by “Early Adopters,” then “Early Majority,” and later, “The Majority,” or everyone else. As innovators, great designers usually fall into the “Early Adopters” category—big risk takers in uncharted territory. A great [designer](#) is also a visionary with the ability to think strategically and analyze trends in order to design better products or services.

# Laying the Groundwork for Telecommuting Success

- Create & Maintain a Shared Vision for success
- Pursue business opportunities in which your organization can support the customer, be successful, and win follow-on opportunities
- Strong, capable technical recruiting
- Strategic partnering for staff augmentation
- Strong leaders with successful track records
- Reliable, talented, dedicated employees with successful track records
- Create work plans and schedules that are aligned with the Customer's requirements and demands
- Have flexibility with the Customer's requirements and demands
- Execute on your strategic and tactical plans
- Report the results
- Share the feedback and kudos, bad and good
- Make adjustments and improvements when necessary

# Digital Economy Indicators

The Digital Economy Fact Book, in its ninth edition (Britton and McGonegal, 2007), presents a factual basis from which analysis of a given entity in the new economy can start. The indicators are:

- **The Growth of the Internet:** host computers and domains, online population, number of Websites, ISP, etc.;
- **The Hardware Sector:** PC sales, cell phones, smartphones, data storage, gaming hardware, etc.;
- **The Communications Sector:** telephone subscription, wireless industry, VoIP, email, etc.;
- **The Digital Media:** TV, Internet Video, Music, Radio, Gaming, Online News, Blogging, Social Networking, etc.;
- **The Electronic Commerce:** Internet advertising, online finance, online travel, online health care, and the types of e-commerce systems (B2C, B2B, etc.).
- **The Threats to the Digital Economy:** malicious software, spam, phishing, identity theft, piracy, privacy violation, etc.
- **The Worldwide Digital Economy:** funding for new ideas, mergers and acquisitions, outsourcing and offshoring, IT spending, etc.

Source: Etoundi, R. A., et al. (2016). Development of the Digital Economy in Cameroon: Challenges and Perspectives.

# Key Trends Affecting ICT and Its Development

- The emergence of four great forces: mobile, social media, cloud computing and massive data (big data);
- Open data from public or private entities ;
- Promoting open government data by governments to increase the transparency of the public sector and provide benefits economic and social;
- Constant high spending on research and development (R&D) and many patents, reflecting the key role of ICT in innovation;
- An increase in broadband subscriptions and the use of a smart phones or digital tablets
- An increase in global Internet traffic, but at a slower pace in previous years;
- Exponential growth in energy consumption associated with Internet use: In 2013, the Internet and all new technologies consumed about 10% of the world's production of electricity;
- A gap between SMEs and large companies regarding the acquisition or the development of ICT;
- An increase in world trade of ICT goods and services;
- Faster growth in the ICT services than in the manufacture of ICT goods;
- Convergence of service and manufacturing in the ICT sectors;
- Birth and growth of digital companies, which result in new business models that challenge the regulatory environments;
- The emergence of a collaborative economy which contributes to the creation of new consumption patterns, favoring exchanges and sharing of goods and services;
- Improving the performance of telecommunication networks through the deployment of optical fiber and 4G networks;
- Questionings related to governance (routing Requirements or local content, data storage, network neutrality, acceptance Universal multilingual domain names, etc.).

All these trends are crucial because they can form the basis of a set of useful key performance indicators in the digital economy.

## 10 Reasons You May Not be Cut-out to Be a Teleworker

1. You fall prey to external distractions
2. You're a sitting duck for internal distractions
3. You can't put together the necessary equipment, services, or infrastructure to do your job
4. You can't sustain enough (or any) proactive contact with the office
5. You don't function well without a lot of structure
6. You have a manager who can't or won't manage remotely
7. You can't establish boundaries with friends, family, or neighbors
8. You can't bring yourself to quit for the day
9. You can't work independently
10. You hate missing out on collaborative opportunities

# The Fourth Industrial Revolution, its Socio-Economic Impact, and the Challenges Ahead

Bell curve graphic of the technology adoption life cycle.

In the technology adoption life cycle, “Innovators” are the smallest group, yet the most successful. They are followed by “Early Adopters,” then “Early Majority,” and later, “The Majority,” or everyone else. As innovators, great designers usually fall into the “Early Adopters” category—big risk takers in uncharted territory. A great [designer](#) is also a visionary with the ability to think strategically and analyze trends in order to design better products or services.

# The Fourth Industrial Revolution, its Socio-Economic Impact, and the Challenges Ahead

## WE ARE AT THE CUSP OF THE 5TH INDUSTRIAL REVOLUTION

Recent rapid adoption and application of artificial intelligence algorithms — triggered by access to big data and better hardware processing capabilities — are changing the face of blue and white collar jobs.

# Technology Is a Doubled-Edged Sword

# Technology Is a Double-Edged Sword

## Job Creator / Job Destroyer

### The Breaking Point

## Bottom Line: People Can't Cope

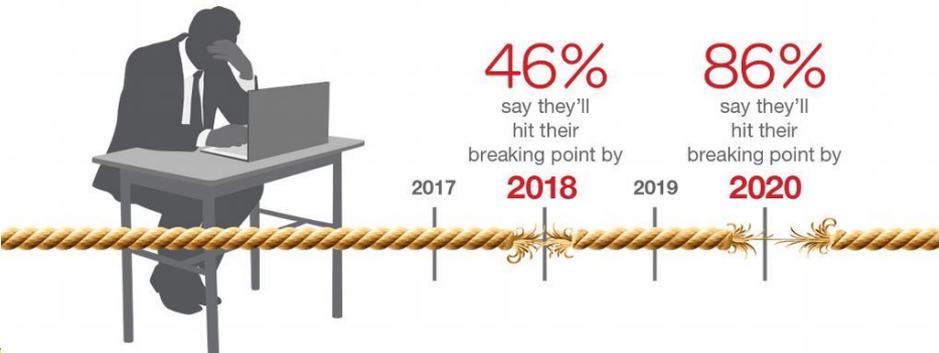

Companies will hit their breaking point and need greater automation to get work done

McDonald's shows off a touch-screen kiosk installed in France in 2009.

McDonald's Europe

The city of Seattle raised their minimum wage to \$15.00 per hour.

About 35% of current jobs in the UK are at high risk of computerisation over the following 20 years, according to a study by researchers at Oxford University and Deloitte.

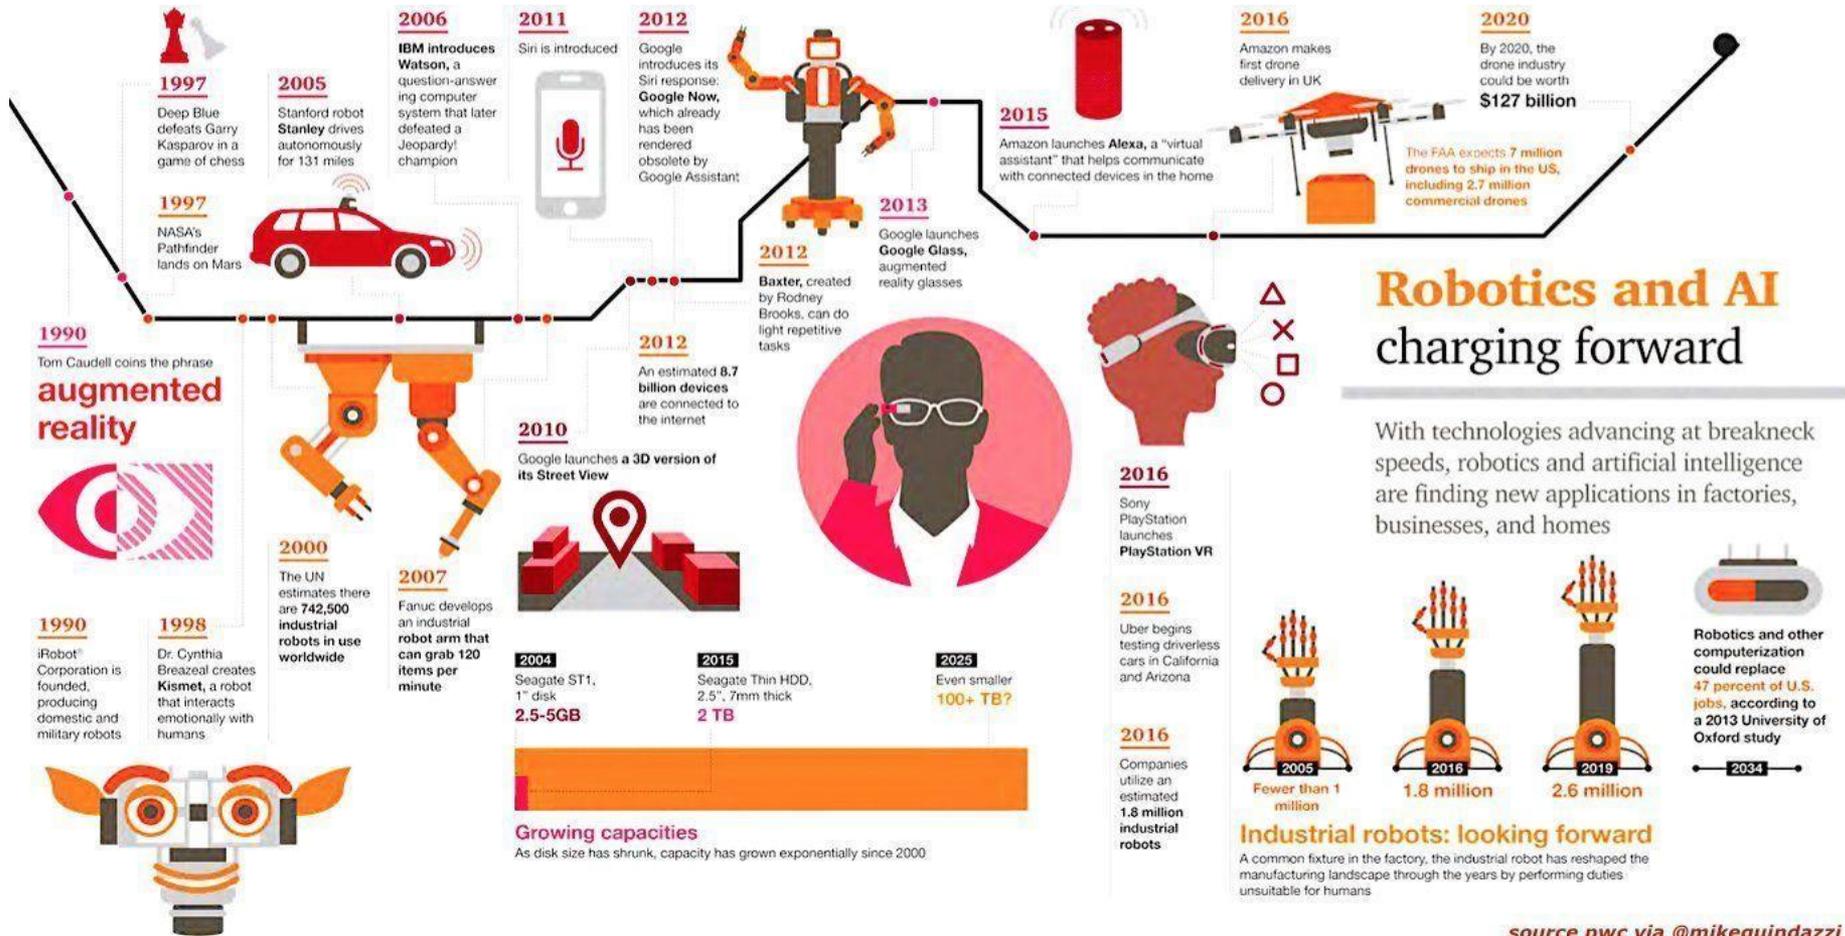

I am a...  
Rather search by typing? [Back to job search](#)

IT project and programme manager

## The rise of Robotics and AI

Fueled by advances in computing power and connectivity, the fields of robotics and artificial intelligence have grown rapidly

# Why Is There Hope?

# Mary Meeker Says “YES”

- Investor Mary Meeker says Covid-19 crisis is separating businesses with strong online strategies from laggards
- Mary Meeker, who is known for her lengthy annual “Internet Trends” report, sent a letter to her firm’s investors detailing observations from the Covid-19 crisis.
- Among them: The businesses who were already well along the offline-to-online transition are faring best.
  - <https://www.cnbc.com/2020/04/17/mary-meeker-covid-19-report-online-businesses-beating-laggards.html>
  - <https://www.axios.com/mary-meeker-coronavirus-trends-report-0690fc96-294f-47e6-9c57-573f829a6d7c.html>
- Why it matters: Bond's best-known partner, Mary Meeker, is a former bank analyst renowned for her annual Internet Trends Report, which many investors and entrepreneurs use as a touchstone for where tech is now and where it's going. This 28-page report to Bond's limited partners, obtained by Axios, shares some structural similarities.

**Mary Meeker**

# Mary Meeker Says “YES”

## ➤ Some takeaways:

- ❑ "Covid-19 has upended our modern lives in ways we're just starting to understand."
- ❑ Prior epic viruses have permanently changed the world, but coronavirus may prove less impactful because of our information-sharing and scientific technologies.
- ❑ Scientists and other domain experts are getting "more seats at the table."
- ❑ Digital transformation is accelerating, due to so many people working from home. New work-life balances are also being struck.
- ❑ This may become the "call to arms" to better marry technology with healthcare, in terms of everything from telehealth to rapid point-of-care diagnostics, to applying automation and AI to health care services.
- ❑ "We are optimists and believe there is hope on the other side of despair.... We need government, business and entrepreneurial intervention at scale (deployed logically and effectively) to get to the other side."

**Mary Meeker**

# My Recommendations

# Recommendations

- Decide what can be done in each of these areas
  - Research and Innovation
  - Entrepreneurship & Startups
  - Digital Business Transformation
  - ICT Sector
  - Workforce
  - Digital Infrastructures
  - Governance
- Create a Digital Future Committee (Slide 39)
- Do a National Skills Inventory to Understand What You Have, and What You Need to Plan to Advance
- Engage Universities and High Schools to Solicit Inputs
- Create a Doable Strategic 3-year Roadmap
- Take advantage of the free training opportunities (Slide 22)
- Enlist the Support of Competent, Experienced Leaders, and If They Are External to Cameroon, Make Sure They Love Cameroon & Its Citizens, More Than Money
- Welcome Women to Participate
- Ensure That You Enlist the Support and Participation of Youth, aged 13 to 25. They are the Future of Cameroon.

# Cameroon Today – The Economy

# Cameroon Today – The Economy

- Annual GDP (2017): \$89.54 Billion
- Annual Per Capita Income: \$3700

Cameroon's market-based, diversified economy features oil and gas, timber, aluminum, agriculture, mining and the service sector. Oil remains Cameroon's main export commodity, and despite falling global oil prices, still accounts for nearly 40% of exports. Cameroon's economy suffers from factors that often impact underdeveloped countries, such as stagnant per capita income, a relatively inequitable distribution of income, a top-heavy civil service, endemic corruption, continuing inefficiencies of a large parastatal system in key sectors, and a generally unfavorable climate for business enterprise.

Since 1990, the government has embarked on various IMF and World Bank programs designed to spur business investment, increase efficiency in agriculture, improve trade, and recapitalize the nation's banks. The IMF continues to press for economic reforms, including increased budget transparency, privatization, and poverty reduction programs. The Government of Cameroon provides subsidies for electricity, food, and fuel that have strained the federal budget and diverted funds from education, healthcare, and infrastructure projects, as low oil prices have led to lower revenues.

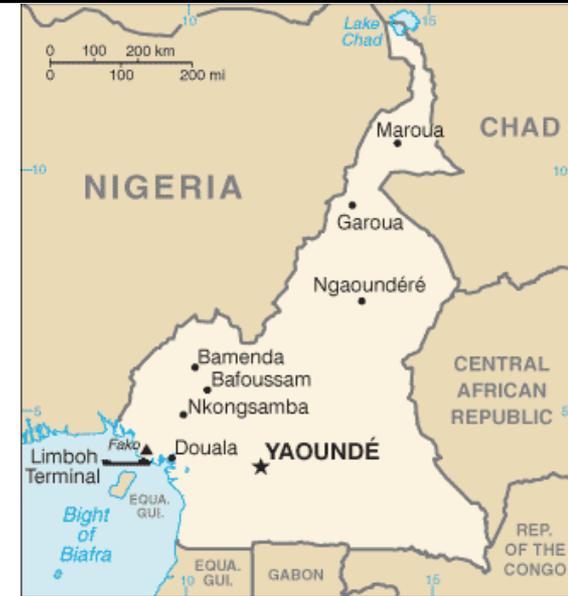

Cameroon devotes significant resources to several large infrastructure projects currently under construction, including a deep seaport in Kribi and the Lom Pangar Hydropower Project. Cameroon's energy sector continues to diversify, recently opening a natural gas-powered electricity generating plant. Cameroon continues to seek foreign investment to improve its inadequate infrastructure, create jobs, and improve its economic footprint, but its unfavorable business environment remains a significant deterrent to foreign investment.

# Cameroon Today – The Geography

# Cameroon Today – The Geography

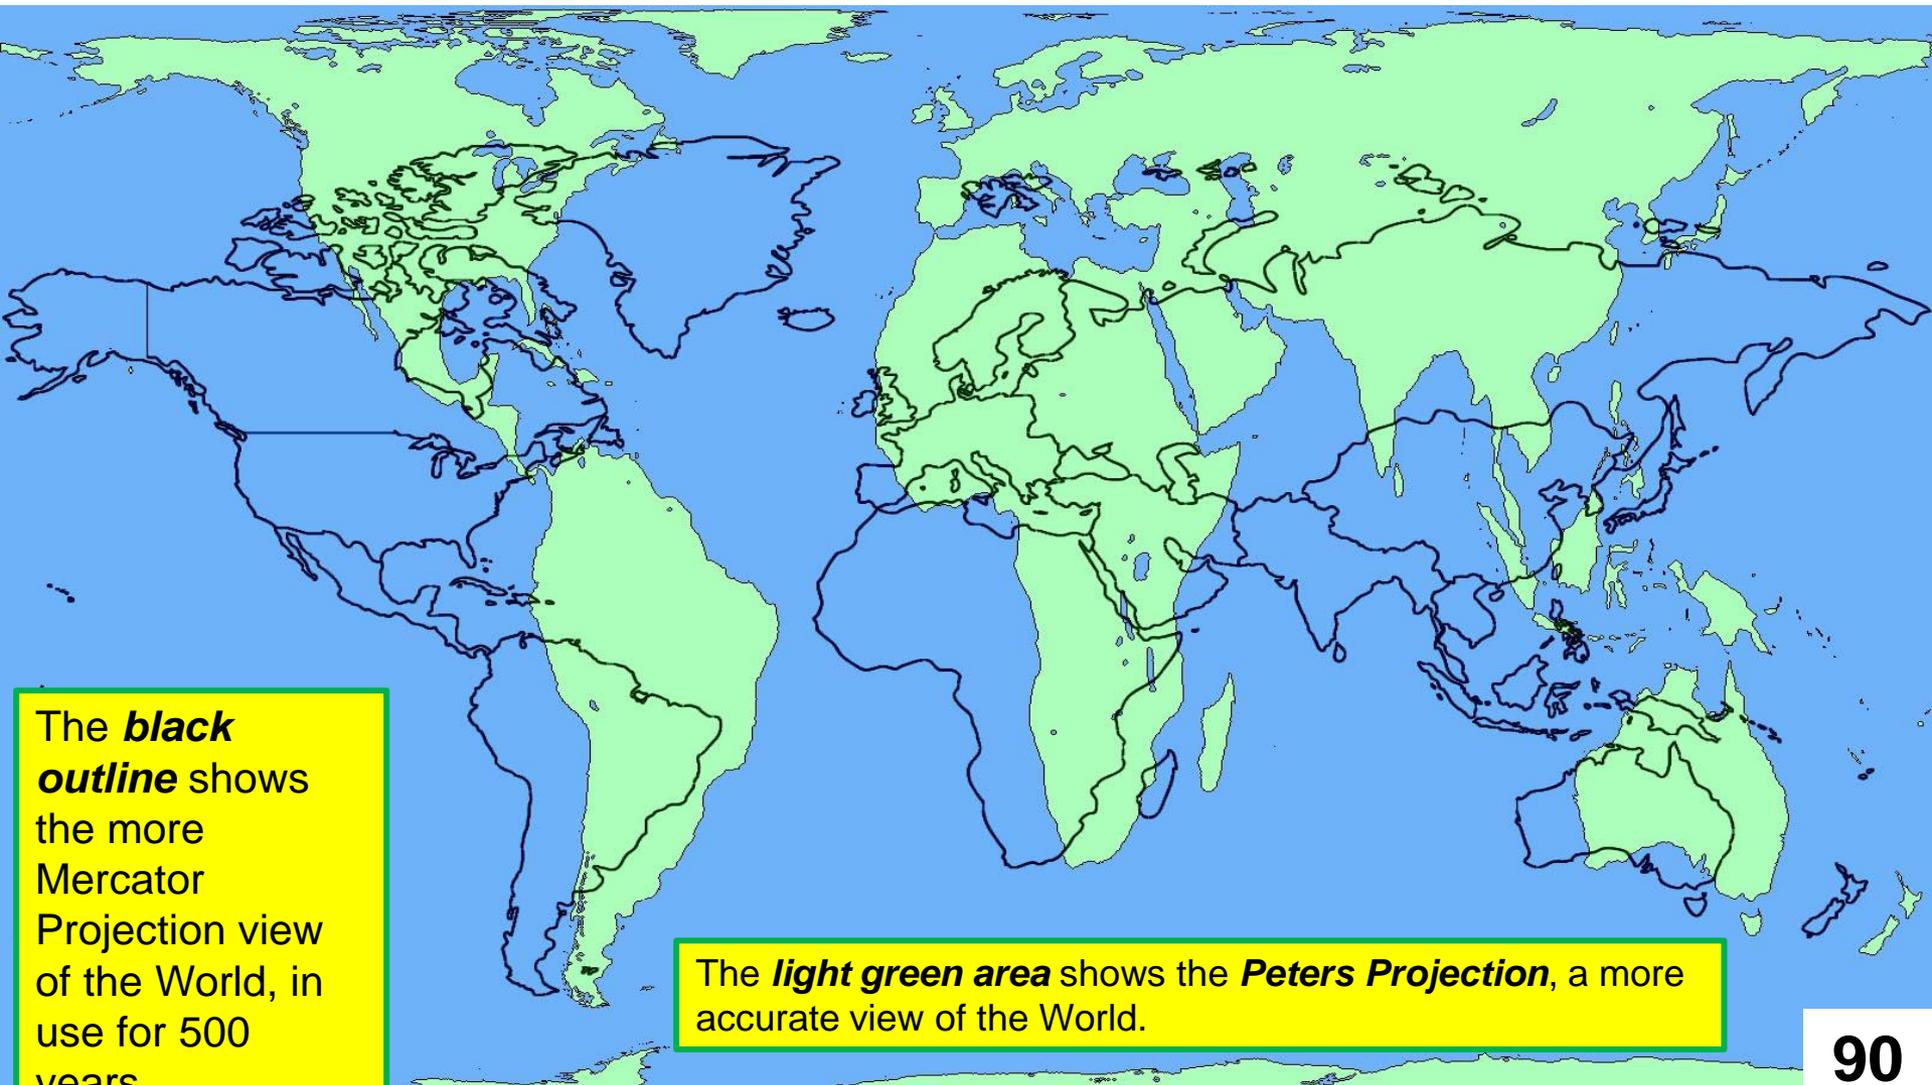

- Central Africa, bordering the Bight of Biafra, between Equatorial Guinea and Nigeria
- Geographic coordinates: This entry includes rounded latitude and longitude figures for the centroid or center point of a country expressed in degrees and minutes; it is based on the locations provided in the Geographic Names Server (GNS), maintained by the National Geospatial-Intelligence Agency on behalf of the US Board on Geographic Names.
- 6 00 N, 12 00 E
- Map references: This entry includes the name of the Factbook reference map on which a country may be found. Note that boundary representations on these maps are not necessarily authoritative. The entry on Geographic coordinates may be helpful in finding some smaller countries.
- Area: This entry includes three subfields. Total area is the sum of all land and water areas delimited by international boundaries and/or coastlines. Land area is the aggregate of all surfaces delimited by international boundaries and/or coastlines, excluding inland water bodies (lakes, reservoirs, rivers). Water area is the sum of the surfaces of all inland water bodies, such as lakes, reservoirs, or rivers, as delimited by international boundaries and/or coastlines.
  - total: 475,440 sq km
  - land: 472,710 sq km
  - water: 2,730 sq km
  - country comparison to the world: 55
- Area - comparative: This entry provides an area comparison based on total area equivalents. Most entities are compared with the entire US or one of the 50 states based on area measurements (1990 revised) provided by the US Bureau of the Census. The smaller entities are compared with Washington, DC (178 sq km, 69 sq mi) or The Mall in Washington, DC (0.59 sq km, 0.23 sq mi, 146 acres). ***slightly larger than California***; about four times the size of Pennsylvania

# Cameroon Today – ICT Influencers and Development Opportunities

# Digital Economy Indicators

The Digital Economy Fact Book, in its ninth edition (Britton and McGonegal, 2007), presents a factual basis from which analysis of a given entity in the new economy can start. The indicators are:

- **The Growth of the Internet:** host computers and domains, online population, number of Websites, ISP, etc.;
- **The Hardware Sector:** PC sales, cell phones, smartphones, data storage, gaming hardware, etc.;
- **The Communications Sector:** telephone subscription, wireless industry, VoIP, email, etc.;
- **The Digital Media:** TV, Internet Video, Music, Radio, Gaming, Online News, Blogging, Social Networking, etc.;
- **The Electronic Commerce:** Internet advertising, online finance, online travel, online health care, and the types of e-commerce systems (B2C, B2B, etc.).
- **The Threats to the Digital Economy:** malicious software, spam, phishing, identity theft, piracy, privacy violation, etc.
- **The Worldwide Digital Economy:** funding for new ideas, mergers and acquisitions, outsourcing and offshoring, IT spending, etc.

102

# Key Trends Affecting ICT and Its Development

- The emergence of four great forces: mobile, social media, cloud computing and massive data (big data);
- Open data from public or private entities ;
- Promoting open government data by governments to increase the transparency of the public sector and provide benefits economic and social;
- Constant high spending on research and development (R&D) and many patents, reflecting the key role of ICT in innovation;
- An increase in broadband subscriptions and the use of a smart phones or digital tablets
- An increase in global Internet traffic, but at a slower pace in previous years;
- Exponential growth in energy consumption associated with Internet use: In 2013, the Internet and all new technologies consumed about 10% of the world's production of electricity;
- A gap between SMEs and large companies regarding the acquisition or the development of ICT;
- An increase in world trade of ICT goods and services;
- Faster growth in the ICT services than in the manufacture of ICT goods;
- Convergence of service and manufacturing in the ICT sectors;
- Birth and growth of digital companies, which result in new business models that challenge the regulatory environments;
- The emergence of a collaborative economy which contributes to the creation of new consumption patterns, favoring exchanges and sharing of goods and services;
- Improving the performance of telecommunication networks through the deployment of optical fiber and 4G networks;
- Questionings related to governance (routing Requirements or local content, data storage, network neutrality, acceptance Universal multilingual domain names, etc.).

All these trends are crucial because they can form the basis of a set of useful key performance indicators in the digital economy.
