Is It Safe?

Diligently Practice Information Security

Information Security

It's Everyone's Responsibility

- Remember:
 - Protect your password
 - Lock your console session when away
 - Do not leave sensitive data in open view
 - Store data on the LAN in a secure directory
 - Do not discuss sensitive information on phones and cell phones, or in public
 - Practice safe computing
 - Protect the client's data and information like it was your own
 - Your Job and your organization's reputation depend on your dependability and your trustworthiness

What Is Information Security?

- The quality or state of being secure to be free from danger
- Security is achieved using several strategies simultaneously or used in combination with one another
- Security is essential to protect vital data, information, and processes as well as the systems that provide this data, information and processes
- Security is not something you buy, it is something you do

CIA – The Security TRIAD

- CIA is good way of framing information security.
- **Confidentiality** - the ability to hide information from those people unauthorized to view it.
- **Integrity** - the ability to ensure that data is an accurate and unchanged representation of the original secure information.
- **Availability** - the ability to ensure that the information concerned is readily accessible to authorized viewers at all times.

Objectives of Security – the TRIAD

Hidden Dangers of

facebook

- Your information is being shared with third parties
- Privacy settings revert to a less safe default mode after each Facebook redesign
- Facebook ads may contain malware
- Your real friends unknowingly make you vulnerable
- Facebook and other entities on Facebook meticulously record and profile your “Likes” for marketing research and other purposes
- Scammers are creating fake profiles
